

**The most
experienced CDMO
you may not know.**

Contents:

Chapter 1: Yes, we really do this

Chapter 2: Unparalleled experience

Chapter 3: Science Experts

Chapter 4: Minimizing your risk

Chapter 5: We have the right team

Chapter 1

Yes, we really do this

Tergus Pharma is an end-to-end CDMO focused only on outsourced manufacturing of topical dermatologic products. With no products of our own to produce, our customers always have top priority. As a result, we are 100% dedicated to our customers' individual needs, allowing us to build a high level of expertise for every tech transfer, scale up, and commercial launch activity.

When selecting a CDMO, you'll want to understand how well it fits your unique product and organizational needs. You'll want a CDMO that has the capabilities and flexibility to grow with you, and that supports the level of quality, communication, and oversight that you expect. Tergus will work with you closely to ensure a timely and successful tech transfer.

Chapter 2

Unparalleled experience

Tergus Pharma has an unmatched reputation as an industry leader in topical drug development and manufacturing. Through our FDA inspected, cGMP and DSCSA compliant facility, we've delivered successful drug product programs for hundreds of clients since 2012. As pioneers in the use of Quality by Design (QbD) principles applied to topical pharmaceuticals, we help our customers build quality into every aspect of product development and production.

Chapter 3

Science Experts

Tergus is also a pioneer in IVRT testing and has amassed one of the largest banks of IVRT Franz Diffusion cells in the world. Our industry experts quite literally helped write the book on testing protocols such as SUPAC-SS, and we constantly work on new APIs to provide you with outstanding results. Being the leader in drug development for semi-solids, we bring unmatched experience and intellectual power to bear for your topical pharmaceutical needs.

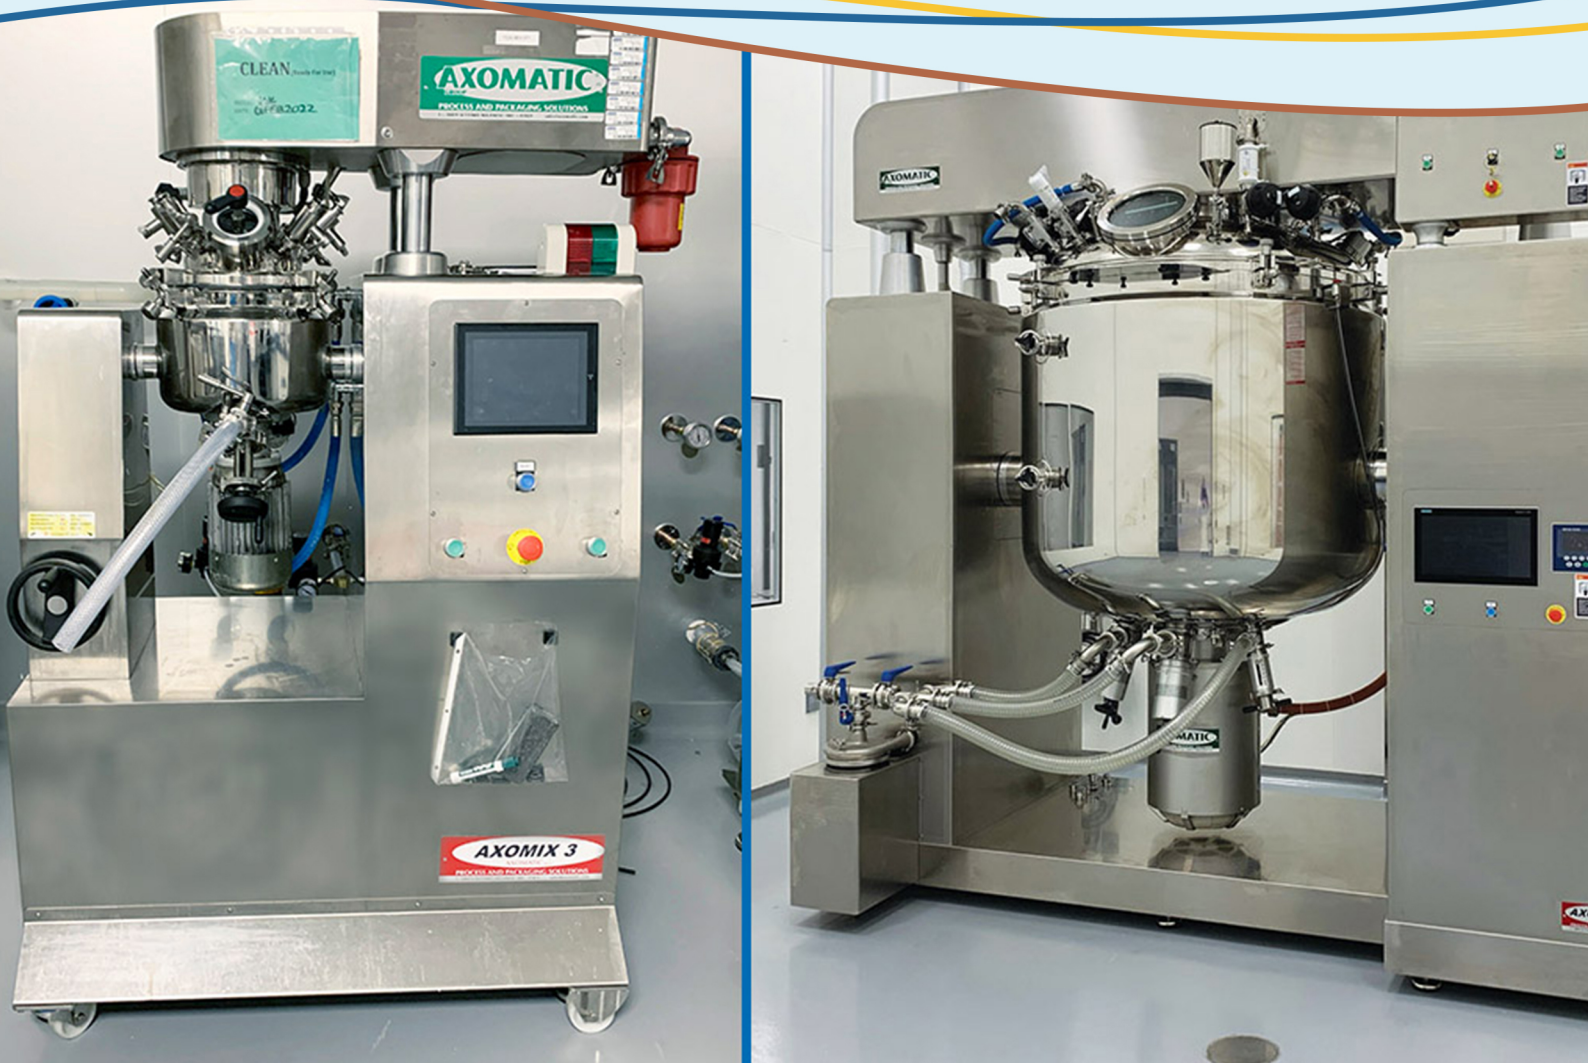

Chapter 4

Minimizing your risk

Scale-up as part of any tech transfer process has inherent risks. With our singular focus on topical products and processes, we minimize risk and potential delays. Our tech transfer program is supported by a purpose-built platform with a wide range of manufacturing capabilities and technologies to ensure quality, speed, and client success.

Your CDMO partner's equipment and capabilities should have the ability to adjust to fit your specific scale-up needs. Tergus Pharma built a flexible commercial manufacturing platform that supports 30L to 1500L batch sizes on the same scalable manufacturing equipment, accelerating turnaround times by eliminating the need for re-validation.

Chapter 5

We have the right team

Tergus was founded by Dr. Vijendra Nalamothu, an expert in the field of dermatology drug development and analysis. Dr. Nalamothu has worked for decades with early stage compounds, evaluating their feasibility for topical drug products. More recently, Tergus has assembled a highly experienced team of pharmaceutical manufacturing and quality experts. The manufacturing and quality leadership teams combined have nearly a century of pharmaceutical experience at industry-leading companies. This veteran group of experts will apply their considerable experience and knowledge to ensure that your topical manufacturing needs are met.
